a durable assistance for the public safety agencies, as well as for the personal safety of others. 3) Personal safety – one of the most popular and powerful reasons for owning a working handgun is protection, and owning a personal response weapon makes your life a little safer. It doesn't matter whether your weapon of choice is a handheld defensive pistol, an AR-15 semi-automatic rifle or a shotgun. While some may argue that a "high capacity" magazine, "assault weapon" or "bump stock" can provide the additional punch and performance you need, the fact is that, for personal and family protection, you may never need to use any of those. There are plenty of ways to meet your individual goals for self-defense without resorting to these various implements, so there are no "evils" in their ownership. It should be noted that we're not advocating a "one size fits all" approach, however. There are a variety of needs and situations one can find themselves in, and the realities are that individuals vary in age, physical attributes, home and work environments and the other myriad variables that can influence how well and how fast you can effectively defend yourself. As a matter of fact, if you've had some serious encounter with a thug, it's likely that the less you've had time to prepare yourself, the more likely you are to become the thug's next victim. What this means is that you should give yourself as much time as possible to prepare for a home intrusion, and the best way to do this is to use methods like self-defense training, physical conditioning and practicing your "combat shooting" skills. VEGF expression in human gastric carcinomas as a prognostic factor. Vascular endothelial growth factor (VEGF) is a potent stimulator of angiogenesis, and increases the permeability of tumor capillaries. The purpose of the present study is to investigate whether VEGF expression can be a prognostic factor for patients with gastric carcinomas. Immunohistochemical staining for VEGF was performed on 150 consecutive resected specimens from gastric carcinomas. We analyzed the relationships between the staining patterns and clinical outcome. VEGF positive cases were associated with adverse prognostic factors. There was a significant difference in 5-year survival between VEGF negative and positive cases with lymph node metastasis ($p = 0.01$). VEGF negative cases were associated with better prognosis than VEGF positive cases in patients with superficial or moderately differentiated adenocarcinomas ($p = 0.01$). In cases without lymph node metastasis, VEGF negative was associated with better prognosis in all of the histological classes (p How to go into detail? 3 Answers 4 You can't, the variable isn't set by the line of code you're tracing. You can for example declare an int and set it to 0; it will be in debug mode. Remember to only use this in release mode. Debug mode is useful sometimes, but it can be more usefull when debugging the code inside your IDE. The reason you get "caused by" rather than "no idea what's going on" is that the debugger has to go up the call stack and the stack isn't very deep (for functions or prototypes), so it doesn't see the actual definition of the function anymore, just the function call. This blog entry has a good explanation of the topic. There are some tools available, that help you to find the actual point in the code where the error occurs, which in turn also helps you to find the error message. Microsoft Visual Studio has this feature built in: Not really much of
